Forefront Medical has acquired the feeding tube catheter product range from BioSearch Medical Products. These products feature high performance, medical grade polyurethane tubing, coated with Hydromer® coating, which allows for easy insertion of the device. The dual port design provides for both simultaneous feeding and decompression. The products are available in two types: Naso-Gastric (NG) and Jejunal (J) feeding tubes. Jejunal feeding tube catheters are available for both the guidewire and tether placement techniques.

Forefront Medical is a fully integrated contract manufacturer with global capabilities to meet customers' exacting manufacturing requirements. Forefront's expertise focuses on injection molding, extrusion, assembly and packaging. In addition, complimentary in-house services include product design/development, rapid SLS prototyping, tool making, class 100,000 molding and extrusion production areas, class 10,000 clean room assembly, product testing, packaging, sterilization and global supply chain management. They are ISO 9001:2008, ISO 13485:2003 and FDA CFR 21 Part 820 registered.

Forefront Medical's technical solutions reduce customers' time to market, ensure confidentiality of new designs and protection of intellectual property. For a confidential technical evaluation, please call 1 (860) 255-7610 (North America) / +65 6349 3888 (Asia) or on the web at <http://forefront.sg>.
